

```
import React, {useState} from 'react'

const GreetingForm = () => {
  const [name, setName] = useState('')

  const handleSubmit = (e) => alert(`Hi ${name}`)

  return (
    <form onSubmit={handleSubmit}>
      <input
        value = {name}
        onChange = {(e) => setName(e.target.value)}
        placeholder = "Enter your name"
      />
      <button type = "submit">Submit</button>
    </form>)
}
```

javascript

```
export default GreetingForm

import React from 'react';
import GreetingForm from './GreetingForm'

export function App(props) {
  return (
    < GreetingForm />
  );
}

// Log to console
console.log('Hello console')
```

javascript
